

Patient safety first: how to optimize reprocessing processes in CSSD

Date 9th June 2021
Time 09:00 – 10:30 CET

- Topics**
- Surgical site infections - facts and figures
 - Existing standards and guidelines
 - A process – what does it mean?
 - Why process verification matters
 - Rationale for process validation
 - Most important process factors

Surgical site infections (SSIs) are globally omnipresent and the associated costs are enormous. To proactively reduce the SSI risk, clean and sterile surgical instruments are an absolutely critical factor (amongst others). As CSSD staff, you can make a difference here. The important question here is: „How can I ensure that my reprocessing is safe and, at the same time, drives cost savings for my institution?“

Register and tune-in to this highly interactive webinar in which Ben Siegmund hosts Petra Labonte and Pawel Stojalowski sharing their extensive knowledge in this field. Register TODAY to learn more about safe reprocessing of medical devices in the first Borer Medical Webinar.

Host

Ben Siegmund
International Sales Manager
Borer Chemie AG

Guest Speakers

Petra Labonte
Managing Director
Labonte Medical GmbH

Pawel de Sternberg Stojalowski
Managing Director & Founder
Aseptium Ltd.
